DELIVERY INCLUDED
(MAINLAND UK
ADDRESSES ONLY)

This handheld temperature screening thermal camera has been configured to detect elevated skin-surface temperatures; on-board recording to a local SD card for post-event review and to evidence that temperature screening has been carried out to reduce risk to staff and visitors.

Temperature measurements are accurate to within 0.5 °C. It is ideal for use in busy indoor environments such as offices, factories, stations, airports, schools and similar areas. Capable of measuring skin-surface temperatures in just 1 second; it provides an effective method of screening individuals rapidly and without any physical contact.

Measuring for elevated skin-surface temperatures can be used to give an initial indication that an individual may be a virus-carrier and that further investigation, testing and diagnosis by medical professionals should be sought.

Equipped with a 320x240 pixel, 2.4" LCD display and capable of up to 8 hours' use between charges, this compact and portable fever screening camera has little competition for the price.

This handheld temperature screening camera MUST NOT be considered a diagnostic test or instrument. However, when used to give an indication of a person's body temperature, it can be an effective tool in helping to reduce the potential spread of infection.

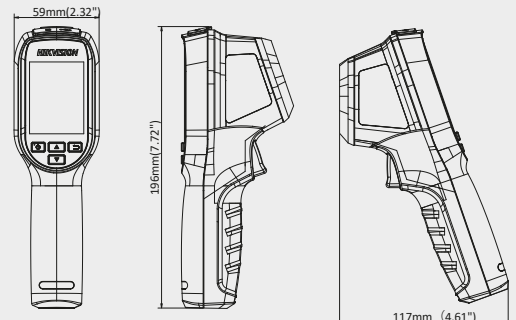

Features

- One second to detect skin-surface temperature
- Simultaneous multi-person detection and measurement
- Non-contact temperature measurement system
- Immediate notification alarms
- AI detection to reduce false alarms
- 160x120 resolution thermal sensor
- 320x240 resolution 2.4" LCD display
- Measurement range: 30-45 °C
- Temperature accuracy: ± 0.5 °C
- Up to 4 palettes
- 8gb removable memory card included
- Built-in rechargeable Li-ion battery
- Up to 8 hours continuous operation
- Dimensions: 196mm \times 117mm \times 59mm
- Weight: 350g

Kit contains

- Power Adaptor
- USB cable
- 8GB memory card
- User manual
- Software Disk
- Wrist Strap
